

1 EXECUTIVE SUMMARY

1.1 Mission Statement

Cellform seeks to gain a leading position in the distribution of topical analgesics in the form of herbal pain relief patches and continue to develop innovative natural products with an industry reputation for quality.

Cellpatch

1.2 Business of the Company

Cellform Technologies has created the Cellpatch, a topical analgesic with a new and all natural way of administering pain relief to the body. The product delivers pain relief from a patch coated with a proprietary herbal formula that is placed on the skin. It is considered that a patch is more effective than traditional methods of delivery such as oral ingestion or creams. Cellform has developed a proprietary herbal formula that has proven effective at relieving pain. The Company has spent considerable time in the lab, perfecting a method of extracting and stabilizing the full spectrum of active ingredients, the phytochemicals, from the botanicals in order to deliver the freshest, most effective product to people who suffer from pain. Additionally, the company has developed an exclusive patch technology that ensures the easy application of the botanicals. Cellform will wholesale the Cellpatch suite of products to pharmacies, retail stores and online at its own and at other websites.

...the most convenient, effective Pain Relief Patch ever devised....

1.3 Cellpatch Product

...the most convenient, effective Pain Relief Patch ever devised....

Cellform has developed a unique product; Cellpatch, a topical analgesic that delivers botanical compounds to specific areas of the body to help alleviate acute and chronic pain. Cellpatch® is a superior pain product because of the specific botanical ingredients formulated using wild and commercially grown herbs coupled with the newest and only known technology to produce a full spectrum concentration of phytochemicals aimed at healing damaged cells.

Dose delivery is controlled by the patch size and product loading on the microprojections. Cellform has developed a hydrogel technology that has is a proprietary natural formulation. Product-coated microprojections deliver a pain relief remedy and yield a high utilization and bioavail-ability. Cellpatch has the ability to reduce inflammation, increase blood flow, and ultimately give new life to cellular activity.
