**3 SERVICES****3.1 Introduction**

Industrial Coating Company has grown from a small operation to become one of the largest coating companies in BC. A list of marquee clients includes BC Ferries; BC Hydro; General Electric; BC Rapid Transit; the Cities of Kamloops, Nanaimo and Nelson; Terasen Gas; Defense Construction Canada and others. The Company has won awards and citations for excellence both in performance and remediation work.

3.2 Services

Industrial Coating Company offers a full complement of services that address the problems of rust, erosion and corrosion damage to large scale assets.

3.2.1 Lead and Asbestos Abatement

The removal of industrial and marine coatings is one of the leading generators of lead waste. Lead and asbestos have been designated as toxic substances and therefore a hazardous waste, defined and regulated by the federal and provincial Environmental Protection Act and Waste Management Regulations.

In accordance with the Canadian Environmental Protection Act and OSHA regulations, the owner/generator of a hazardous waste is responsible for all aspects of management of hazardous waste, from identification to appropriate disposal. This is where a lead abatement program comes into play. The protection of people and the environment requires effective, knowledge based planning and controlled removal of this hazardous waste.

Industrial Coating Company has the expertise through trained & certified leadership, manpower and specialized equipment, to execute any sized lead abatement project, in the most cost effective, safe and timely manner.
